

STOPPING EYE DISEASES IN THEIR TRACKS

Your eyesight is one of, if not the most useful of your senses. But with age, your eyesight can contract degenerative diseases much easier, and cause life changing impacts to your daily life. Stopping these illnesses from getting too serious is a lot simpler than it sounds: Getting routine exams.

WHY ARE EYE EXAMS IMPORTANT?

- Over 41.5% of elders simply do not get eye exams
- An estimated 50% of all patients with Glaucoma are unaware of its symptoms
- About 58% of asymptomatic elders get treatment only after a routine checkup

BENEFITS OF GETTING EYE EXAMS

Getting regular eye exams are one of the most effective ways to catch life-changing diseases before they cause irreversible damage, especially if you are over the age of 65. Getting over the belief that you only need to go see a doctor if you are sick is key to being healthier.
